

DAVIS®

Apex

Designed by Wolfgang C.R. Mezger

Apex embodies the height of functionality and design. Offered in a full array of shapes and sizes, Apex is perfect for conferencing, small meetings, or high-end cafés. Despite the sleek design, Apex is deceptively strong. Constructed through a fusion of wood and steel, Apex utilizes smart engineering to maintain the Davis standard of beauty, strength, and design.

Several of the Apex tables have the option to add electrification with the choice of one or two power units. Access lids are designed to harmonize with the table top finish; veneer tops have matching access lids while white acrylic tops have chrome or powder coat finish options.

The aluminum leg offers standard vertical wire management with a white or black plastic insert to enclose wires within the leg. Horizontal wire management is a mesh fabric which secures wires to the underside of the table top and keeps them out of sight. These come standard on aluminum leg tables with power/data units.
