

Versatile Healthcare Stools

Jusky is a unique stool for healthcare, with a seat and tablet proportionately designed for maximum comfort and ease of use. Though geared towards exam rooms, waiting rooms, laboratories and administration offices, Jusky is adaptable and functional in a wide variety of environments.

Where infection control is important, Jusky's seat can be upholstered with Siliform®, Keilhauer's patented process for using silicone as an upholstery. Siliform is an ideal upholstery for healthcare because it is inert, impermeable to fluids, inherently flame retardant, does not off-gas, and does not support microbial growth. It can be cleaned easily with soap and water yet withstand the harshest of hospital grade cleaners.

Both the seat cushion and the backrest can be upholstered in any Keilhauer textile, leather, polyurethane or COM and COL.
