Techniq

Designed by Jonathan Prestwich

Prioritizing beautiful form and practical functionality; Techniq tables by Jonathan Prestwich are ideal for flexible working environments. Techniq is a line of task and conference tables with a variety of options for the modern workspace. Whatever your perfect workspace looks like, Techniq is the solution.

Featuring three different leg designs, Techniq supports how you work. The T-Leg Inset Base allows for user mobility around the entire circumference of the table. The T-Leg Edge Base creates a more traditional table set up with ideal leg room for multiple users. The C-Leg Base creates a one-sided working table that allows for narrow widths, perfect for tight working spaces.

Techniq tabletop options include a variety of widths and lengths, with supplemental shapes including semi-circle, trapezoid, and quarter round tables. Utilize these alternative shapes to create straight lines, squares, multi-faceted echelons, round tables, and seminar and racetrack configurations. Optional modesty panels are available to complete many of these configurations. When not in use, Techniq tables nest together nicely to facilitate easy storage.

Not only does the tabletop flip up for access to power and data boxes, the wire management trough beneath the tabletop is made from an extruded felt material that is ridged enough to keep wires in place yet flexible enough to bend and allow for wire management access when the tops are in the working position. Techniq legs include built-in vertical wire management, and all table tops are equipped with ganging devices for secure configurations.
